Dear Hiring Team,

I'm writing to express my strong interest in the Senior Vice President of Engineering role at Hearst Magazines. The opportunity to lead engineering for a portfolio of 30+ iconic brands—and to shape how technology powers the next generation of media experiences—is exactly the kind of challenge I've spent my career building toward.

At GoTo Foods, I serve as the single architectural authority across a multi-brand consumer organization, leading the consolidation of 7 independent brand apps and websites into a unified, composable digital platform—aligning engineering, product, marketing technology, and data teams around a shared architecture. This is directly analogous to Hearst's challenge: enabling a portfolio of distinct brands to move faster on a modern, scalable platform underneath.

Multi-brand platform unification at scale. I defined the composable architecture, integration patterns, and governance models that allowed 7 brands to ship independently on a shared foundation. I understand the organizational and technical tradeoffs this requires, and how to bring product, design, and engineering into alignment around a shared roadmap.

AI as a force multiplier. I'm leading enterprise-wide AI and LLM adoption—not as a theoretical exercise, but as production capabilities embedded in consumer products, APIs, and internal workflows. I've defined the architectural patterns, guardrails, and governance that make this safe and scalable. At Hearst, the opportunity to apply AI to content personalization, engineering productivity, and new consumer experiences is compelling.

Global hybrid team leadership. From managing global delivery at Jacada, to directing blended teams of in-house engineers and nearshore/offshore contractors at Slalom, to leading a senior architecture organization at GoTo Foods—I've built and scaled engineering organizations that deliver at high velocity across locations and team models.

While media is a new domain for me, the core engineering challenges—composable architecture, content platforms, data-driven personalization, multi-brand scale—are ones I've solved in other contexts. I'm genuinely excited about applying that experience to an industry I admire, and I bring the curiosity and adaptability to ramp quickly.

I'd welcome the opportunity to discuss how my experience aligns with Hearst's engineering vision. Thank you for your consideration.

Sincerely,
Gautam Velpula
