Hiring Manager

TransCore (TRN), a subsidiary of ST Engineering, Atlanta, GA

Re: Head of Platform Engineering — Smart Mobility Development

Dear Hiring Manager,

I am writing to express my strong interest in the Head of Platform Engineering role at TransCore. Your challenge — bridging physical, real-world edge data with high-volume, cloud-native financial transactions — resonates deeply with my experience building and scaling digital platforms that sit at the intersection of payments, real-time data, and cloud infrastructure.

In my current role as Sr Director of Enterprise Architecture at GoTo Foods, I led the complete greenfield rebuild of our digital platform, replacing a fragmented legacy system with a modern, multi-tenant, microservices-based architecture serving seven brands. I built the Kubernetes (AKS) infrastructure the platform runs on, designed event-driven integration patterns, and drove an API-first strategy that enabled our consumer app teams to ship features rapidly without breaking the core — exactly the platform-as-a-product philosophy you describe.

Payments is central to my experience. I designed and led the integration with FreedomPay, enabling digital wallets, tokenized transactions, and modern checkout flows across all brands. At Slalom Consulting, I conducted a multi-year assessment of a legacy payments platform for one of the largest eCommerce companies in the U.S. and designed payment processing systems for a financial services organization. I understand the complexities of settlement, compliance, and the operational rigor required in regulated transaction environments.

What excites me most about TransCore is the player-coach nature of this role. Throughout my career, I have consistently stayed hands-on during critical delivery phases — writing code, reviewing architectures, and making technical decisions directly — while simultaneously building and mentoring high-performing engineering teams. I am not a leader who delegates from a distance; I lead from within the work.

I am also actively driving AI and LLM adoption within my organization, defining architectural patterns and guardrails for agentic AI use cases — aligning with your preferred qualifications around applying AI capabilities to improve workflow and organizational efficiency.

I am based in Atlanta and would welcome the opportunity to discuss how my experience building greenfield platforms, integrating payments, and leading engineering organizations as a player-coach aligns with TransCore's vision for smart mobility. I am genuinely excited about the impact this role can have on advancing smart cities and transportation technology.

Thank you for your consideration.

Sincerely,

Gautam Velpula
