Dear Hiring Team,

The VP of Technology role at AllCare is the rare posting that asks for both halves of what I do: partner with a CEO to set the technology and product vision, and then roll up my sleeves to build it. I'm an Atlanta-based technology leader who has spent the last several years operating exactly that way — strategist in the room where the roadmap gets decided, and builder in the codebase when the team needs to be unblocked — and the chance to stand up an AI-native healthcare platform from the ground up is genuinely compelling.

At GoTo Foods I partner directly with executive leadership to own what we build, what we buy, and how we architect a scalable platform across a multi-brand, multi-site business. I took a fragmented legacy estate and consolidated it into a unified, connected experience across web and mobile, built the centralized data foundation that turns operational and marketing data into decisions, and made the build-vs-buy calls that focused our investment where it actually differentiated us. Over the last 18 months my focus has been squarely on making AI real inside the business: I chair the enterprise AI Working Group, architect agentic AI workflows and automation that take friction out of back-office operations, and have rolled out modern AI-assisted development with Claude and Copilot on top of AWS Bedrock and frontier models. That is the same “AI-native, efficient operating model” thesis AllCare is building around.

I lead as a player-coach by default. I've recruited and developed lean, high-performing engineering teams and set the bar for speed and pragmatism — but I've also stayed hands-on through attrition and transformation, at one point personally building a stop-gap service to stabilize revenue when a legacy system failed. I work at the seam between technology and the business, partnering with operations and business leaders to design systems that actually work in the real world, and I've owned security and compliance in a regulated, high-volume payments environment as a continuous participant in our annual PCI DSS audit — experience that translates directly to standing up a HIPAA and SOC 2 posture alongside your external CISO.

I'll be candid: my background is in consumer, payments, and retail rather than healthcare. What I bring is the pattern AllCare needs most right now — building modern, AI-native platforms from the ground up, making sharp build-vs-buy decisions, and scaling a lean team across a growing, multi-site footprint — and a real motivation to point that at a mission as human as improving access to care. I'd welcome the chance to talk through how I can help you build it.

Thank you for your time and consideration.

Sincerely,

Gautam Velpula
