Dear Hiring Team,

This role sits at the intersection of the two things I have spent my career doing: advising Fortune 500 executives as a management consultant, and owning enterprise architecture as an operator inside the business. Capgemini Invent's Enterprise Strategy & Transformation practice is asking for a leader who can do both — be a trusted partner to client CIOs and CTOs while governing the architecture and running the delivery that makes the strategy real. As an Atlanta-based executive, I'm also well-positioned for the Southeastern hub and a two-day hybrid cadence.

At Slalom I served as a Senior Delivery Principal, owning multi-million-dollar transformation, cloud modernization, and payments portfolios for Fortune 500 and large-scale eCommerce clients. I was the primary executive-facing advisor — defining target operating models and target-state architectures, and translating business strategy into roadmaps, business cases, and TCO models. On one engagement I ran a multi-year enterprise architecture assessment of a legacy payments platform for one of the largest U.S. eCommerce companies, breaking down the legacy complexity into a prioritized, executable modernization roadmap; on another I led an AWS-to-GCP migration for a leading point-of-sale provider. I partnered with pre-sales to scope, estimate, and win high-value work, sustained roughly 95% client satisfaction with consistent repeat business, and mentored the delivery principals and architects underneath me — the practice-growth motion your role is built around. Earlier, at Jacada, I built and scaled a global professional services organization from the ground up, so I know what it takes to grow delivery capacity, margin, and leadership depth.

What I bring on top of the consulting pedigree is a current, hands-on operator's perspective. At GoTo Foods I am the single Enterprise Architecture authority across a global, multi-brand enterprise. I established the frameworks, standards, and governance spanning the business, application, data, and infrastructure domains; re-architected the estate onto an API-first, event-driven, multi-cloud platform; and translate business capabilities into scalable blueprints and roadmaps — the same capability modeling your clients need when navigating mergers, acquisitions, and expansions. I also chair the enterprise AI Working Group and govern the safe, scalable adoption of GenAI and Agentic AI, which is quickly becoming central to every transformation conversation. Having sat on the client side of these programs makes me a sharper advisor to the executives who own them.

Enterprise architecture governance and standards, multi-cloud and distributed-systems modernization, and the discipline of turning legacy complexity into an executable roadmap are the through-line of my work. I would welcome the opportunity to discuss how I can help grow Capgemini Invent's Enterprise Strategy & Transformation practice, deepen its C-suite relationships, and deliver architecture that moves the business.

Thank you for your time and consideration.

Sincerely,

Gautam Velpula
